TWO PAINTED WOODEN STELAE FROM THE CAIRO MUSEUM

(JE 18651 & JE 4886)

Zakareya R. ABDELMAGUID

ABSTRACT:

This article is a publication of two wooden funerary stelae from the Egyptian Museum in Cairo, bearing the inventory numbers JE 18651 and JE 4886 (SR nos. A 9906 and A 9403). The stelae have never been fully published. The owners are a certain Hor-nakht, son of Ankh-Hor, and overseer of the God's Wife Aqr, named Dd-BAstet-jnk-sy, son of the vizier Jry. Both stelae are coming from Thebes and they are dating from the Late Period (Dynasties. 25/26). The inscriptions contain some interesting features in the spellings of the epithets and offering formulae.

The two stelae are part of a large number of very interesting Late Period wooden funerary stelae in the magnificent collection of antiquities in the Cairo Museum. It is noteworthy that the owners of these stelae are mostly persons attached to the cults of the gods Month and/or Amun. The stelae vary in size from a few centimetres to nearly one meter. They also vary in the quality of workmanship; some being carefully inscribed and artistically decorated, while others are quite poor. With some exceptions, the larger stelae are the best in this respect. One may wondered why wood should have been used as a material for these stelae, and the first idea that comes to mind is reason of economy. But a close study of the material in hand seems to dispute that reason. For one thing, the better-class wooden stelae cannot have been cheap. They have evidently been decorated by first-class artists, and some of them are even embellished with gold. Moreover, many of them belonged to persons of high social standing. Perhaps the portability of wood against the heaviness of stone determined the use of the former material. In addition, these offer an interesting view on aspects of the religion of this Period, particularly on the identification of the forms of Horakhty with Sokar-Osiris. It also is noteworthy that all stelae seem to originate from Thebes and its neighbourhood, namely from the Ramesseum, Deir el-Bahari, Sheikh Abd El-Qurnah, and Medinet Habu. Both stelae were discovered in Sheikh Abdel Qurnah, the first in 1862, and the second in 1859.

1 Institute of African Studies, Cairo University, (Egypt)
1. Stela JE 18651 = SR. A 9906.

This stela belongs to Hor-nakht, son of Ankh-Hor. No title is named\(^4\). It measures 37 cm in height and 22.5 cm in width. According to Munro, the stela seems to date to the 25\(^{th}\) Dynasty\(^5\).

1.1 Representation.

The rounded-topped painted stela is divided into three registers. The upper register in form of a lunette is outlined by a sign of heaven, below which is a winged disk with two \(\text{nfr}\)-symbols. The second register, which is framed at the top and two sides by a border of coloured rectangles, is representing the deceased adoring five deities. The owner of the stela stands on the right side from the observers view. He has a short hair style, and wears a collar and a voluminous calves-long pleated kilt. He stands facing left, his left hand raised in adoration to the gods in front of him, the other stretched showing down. This combination means in two dimensional images: welcome and adoration. Above his figure are two short columns with his name Hor-nakht. The first God in front of him is \((R\text{ē})\text{Horakhty}\). He stands facing right, and is represented as a \(h\text{wt}\)-headed mummy. He wears the \(\text{stf}\)-crown of Osiris, and holds the \(w\text{s}\)-sceptre. His name Horakhty is inscribed above him. Behind \((R\text{ē}-)\text{Horakhty}\), stand the four Sons of Horus wear the multi-row collars, all with mummified bodies and with their names above them. They are the human-headed Imsety with a long beard, the baboon-headed Hapy, the jackal-headed Duamutef, and the hawk-headed Qebhsenuef. Hapy and Qebhsenuef have stylized lotus-buds on their heads. In front and above of the heads of all figures single columns are drawn with a yellow background colour. In case of the representation of the deceased and the last of the Sons of Horus the hieroglyphs for the names became too long for this single column. Therefore, the second half of the name is written beside the column where no background colour was prepared.

1.2 Text.

The lowest register of the stela is occupied by six horizontal lines of hieroglyphic text, altering in white and yellow background colour. The text reads from right to left:
An offering that the king (may) give (a) to Osiris, the Foremost of the Westerners, the Great God, Lord (b) of Abydos, (and to) Rē-Horakhty (c), the Great God, Chief of the Gods, and (to) Imsety, Hapy, Duamutef, and Qebekhsenuf, that he may give (d) thousand of bread, thousand of beer, thousand of oxen, thousand of fowls, thousand of every good and pure things to the Ka of the justified Osiris (e) Hor-nakht, the son of Ankh-Hor (f), his mother (is), the mistress of the house (g), Na-jrt-Bastet-nfr (h).

1.3 Commentary.

(a) This arrangement of htp-dj-nsw was known and usual from the Eleventh Dynasty to the Thirteenth Dynasty.6

(b) The intrusive t in nb is paralleled on our next stela (JE 4886) and some other seventh century BCE stelae from Thebes and Abydos.7

(c) It is clear that the God, whom the deceased worships, is Rē-Horakhty in the form of Osiris and not Sokar as Munro had suggested.8 Osiris is also called Rē-Horakhty on an early sixth century stela in the Calvet Museum, Avignon.9 Conversely, a falcon-headed deity is sometimes called Osiris – e.g. Cairo JE 21991,10 and Chicago FM 31275.11 On the close relationship between Osiris and Rē-Horakhty.12

(d) Writing dj=f instead of dj=sn,13 in the offering-formula is known from many other Late Period stelae - e.g. Stela Cairo A 9905.14

(e) Determining the name of Wsjr with sign (cf. line 1) is common in the Late Period as well.15
(f) This name is very common in the Late Period.\(^{16}\)

(g) \textit{nbt-pr} means married woman, current from the Middle Kingdom to Ptolemaic Period.\(^{17}\)

(h) This name seems to have been confined to the Late Period.\(^{18}\)

2. Stela JE 4886 = A 9403.

The stela belongs to \textit{dd-B^5stet-jnk-sy}, overseer of the God's Wife \textit{3kr}, son of the vizier \textit{Jry}. Its measurements are: high 38 cm, large 23.5 cm. It dates back to the beginning of the 26\(^{th}\) Dynasty.\(^{19}\)

2.1 Representation.

This round-topped stela is perfectly preserved. The rounded upper part is occupied by a winged sun-disk with two \textit{Uraei} pending to the right and left from the disk. Below this motif, is a line of hieroglyphs, repeat twice: \textit{Bhdt ntr g sib swt nb pt} "Behedety, Great God, Dappled of plumage, Lord of heaven". The central part of the stela is framed at the top and two sides by a border of coloured rectangles. It depicts the standing figure of a woman?, with perfume cone upon her head, dressed in a long, diaphanous, loose-fitting robe, and raising both arms in adoration towards a standing figure of \textit{Rē-Horakhty}. Between them is a libation stand with a lotus flower (blossom). The god \textit{Rē-Horakhty} stands facing right, and is represented once again as a \textit{hfrk}-headed mummy, wearing the \textit{Atef}-crown of \textit{Osiris}, and holding the \textit{wís}-scepter. Behind \textit{Rē-Horakhty}, and in keeping with his Osirian character, stand the four sons of \textit{Horus}, the human-headed \textit{Imsety} with a perfume cone on his head, the \textit{baboon}-headed \textit{Hapy}, the \textit{jackal}-headed \textit{Duamutef}, and the \textit{hawk}-headed \textit{Qebekhshenuf} with a stylized lotus bud on his head. Above each figure is a space to write their names, which have never been recorded.

2.2 Text.

The reminder of the surface of the stela is occupied by five horizontal lines of text, alterning in white and yellow background colour. The text reads from right to left:
(1) htp-dj-nsw Wsjr ḫntj-jmntt ntr ʿṭ (2) nb.t sıı 3bdw Rc-Hrj-ḥbtj ntr ʿṭ (3) nb pt dj=sn prt-hrw [m] t ḫntq k3.w 3pd.w ḫw[t 3pd.w (4) ḥt nb[t ḫr(t) w̄b(t) ḥt nb(t) ndm(t) bnr(t) sn̄r (5) n Wsjr ʿkr n dw3t-ntr Dd-Wbštjt-jnk-sj s3 n ṭ3ṭj ḫrj.

(1) An offering that the king gives (to) Osiris, Foremost of the Westerners, the Great God (2), Lord of Abydos, and (to) Rē-Horakhty, the Great God (3), Lord of the Heaven, that they may give an invocation of offering, of bread and beer, oxen, fowls, oxen, fowls (4) and every good and pure things, every agreeable and sweet things, and incense, (5) to Osiris, (Overseer) of the “ḥpr” God's Wife (b) ḥd-Bc-stjt-jnk-sy (c), son (d) of the Vizier Jry (e).

2.3 Commentary.

(a) The offerings k3.w 3pd.w ḫw[t 3pd.w are repeated twice in the abbreviation form and in details.

(b) The titles ʿkr and hrj ʿkr(.w), overseer of the Barrenness?) are attested the men as well as women. The word ʿkr is determinate with the phallus to give the meaning of Barrenness, it is clear that the word has a relation with the Semitic language (hebr. ʿaqār, arab. ʿaqīr). Women could bear the title ʿkr but men should be hrj ʿkr(.w). The following parallels are known: 20

1. Coffin Wien (Inv.3941), Thebes, Dd-Wbštjt-jnk-sj 21

2. Serapeum Stela (Louvre Cat. 79), Nfjr-ṣjt. 22
3. Serapeum Stela (Louvre Cat. 79), T3-(nt)-p3-mr, daughter of the overseer of the army Pw-rm.24

4. Stela Durham Gulbenkian Museum North 1971, Abydos, Hp and his father Dd-Hr.25

5. Stela Zagreb Cat.20, P3f-t3w-m5-wj-Wbastt and his father Dd-Hr.26

6. Stela Cairo T.9/7/24/7, Abydos, Hr-nht daughter of T3rw.27

7. Stela Cairo JE 21811, Wsjr-ms-st.28

(c) This name is not cited by Ranke, PN, but there is one parallel Dd-B3stt-jnk-sw (Bastet spricht: Mir gehört er).29

(d) It is quite clear that the owner of the stela is a male and not a female as it is represented in the upper part of the stela. He is (s3) son of the Vizier Jry and (mw.t=f) is the mistress of the house jr=s5-r-Bastt.30 Zu den thebanischen Totenstelen der 25. und 26. Dynastie (Korrekturen und Ergänzungen).31

(e) Jry was a vizier living at the end of the 25th Dynasty and the beginning of the 26th Dynasty. His name and titles are recorded on a coffin (Wien, Inv.3941) belong to his son Dd-Bastt-jnk-sw, the owner of our stela.32

\[\text{3kr n dw3t-ntr Dd-Wb3stt-jnk-sj s3 jmj-r3 njwt (hm-ntr Jmn jmj-r3 njwt) 3tj Jry mwt.f nbt-pr} \ldots \]
(Overseer) of the God's Wife Barrenness *dj-Bst-š⁵-šnkt-šj, son of the Overseer of the City, (Priest of Amun, Overseer of the City), the Vizier Jry, his mother, the Lady of the House......

3. CONCLUSION:

In the Old and Middle Kingdoms, funerary stelae were inscribed with a depiction of the deceased before an offering table and a list of offerings. In the New Kingdom greater importance began to be placed on association of the deceased with the divinities as a mean of survival in the afterlife, and thus the stelae began to depict the deceased adoring a deity. By the Third Intermediate Period the funerary cult had so diminished in importance that funerary chapels became very rare, except as part of a few large and archaizing tombs, the funerary stelae placed in the underground burial chambers may have been substituted for the funerary cults. This coincidentally allowed the stelae to be made of fragile material plastered and painted instead of stone. At the same time the painted wooden became very popular in Thebes from the 22nd Dynasty. Stelae are very similar, differing only in minor details.33 Our two stelae are part of large number of Late Period funerary stelae which depict four, three or even two sons of Horus. From the late Third Intermediate Period onward, the presence of the four sons of Horus in mortuary context expanded. In addition, to their presence on coffins and canopic containers, faience amulets of the four were attached to shrouds or incorporated into the bead nets that came into use as body cover.34 Dating from their earliest appearances in the Pyramid texts, the four sons of Hours are found exclusively in mortuary contexts, and seem not to have had any cult as such; they are thus generally referred to as "genii". From the Middle Kingdom onward, however, they are ubiquitous within the tomb, invoked upon almost all coffins and canopic containers. In the earlier Pyramid Texts they were among the deities before whom the deceased was stated to possess "reverence" jmḥ.35

3 It is suggested that the Late Period wooden stelae were a Theban phenomenon (H. Saleh, Investigating Ethnic and Gender Identities as Expressed on Wooden Funerary Stelae from the Libyan Period (c. 1069-715 B.C.E.) in Egypt, Ph. D. Dissertation, University of California, Berkeley 2006, 3), although some stelae may have come from Abydos (A. Leahy, Two Late Period Stelae in the Fitzwilliam Museum, SAK 8, 1980, 169-180).

4 Munro, Die spätägyptischen Totenstelen, ÄF 25, Glückstadt 1973, 213.

5 This may have been clear for the recipient because it was placed in the tomb of the owner. We know this from statues, which often have no or only few titles, because they are mentioned in the local context.

7 The following examples are known to me: Cairo T. 26/10/24/1, c. 650 B.C. = Munro, Totenstelen, 266, Abb. 109; London BM EA 639, c. 650 B.C. = Munro, Totenstelen, 268, Abb. 11; Wien KHM 5070, c. 660-650 B.C. = Munro, Totenstelen, 194, Abb. 11; Stela Cambridge Fitzwilliam Museum E.55.34, c. 630 B.C. = A. Leahy, in: SAK 8, 1980, 175-180.
